

**Web and Mobile Applications Out of This World**

# Flutter Technology

## What is Flutter?

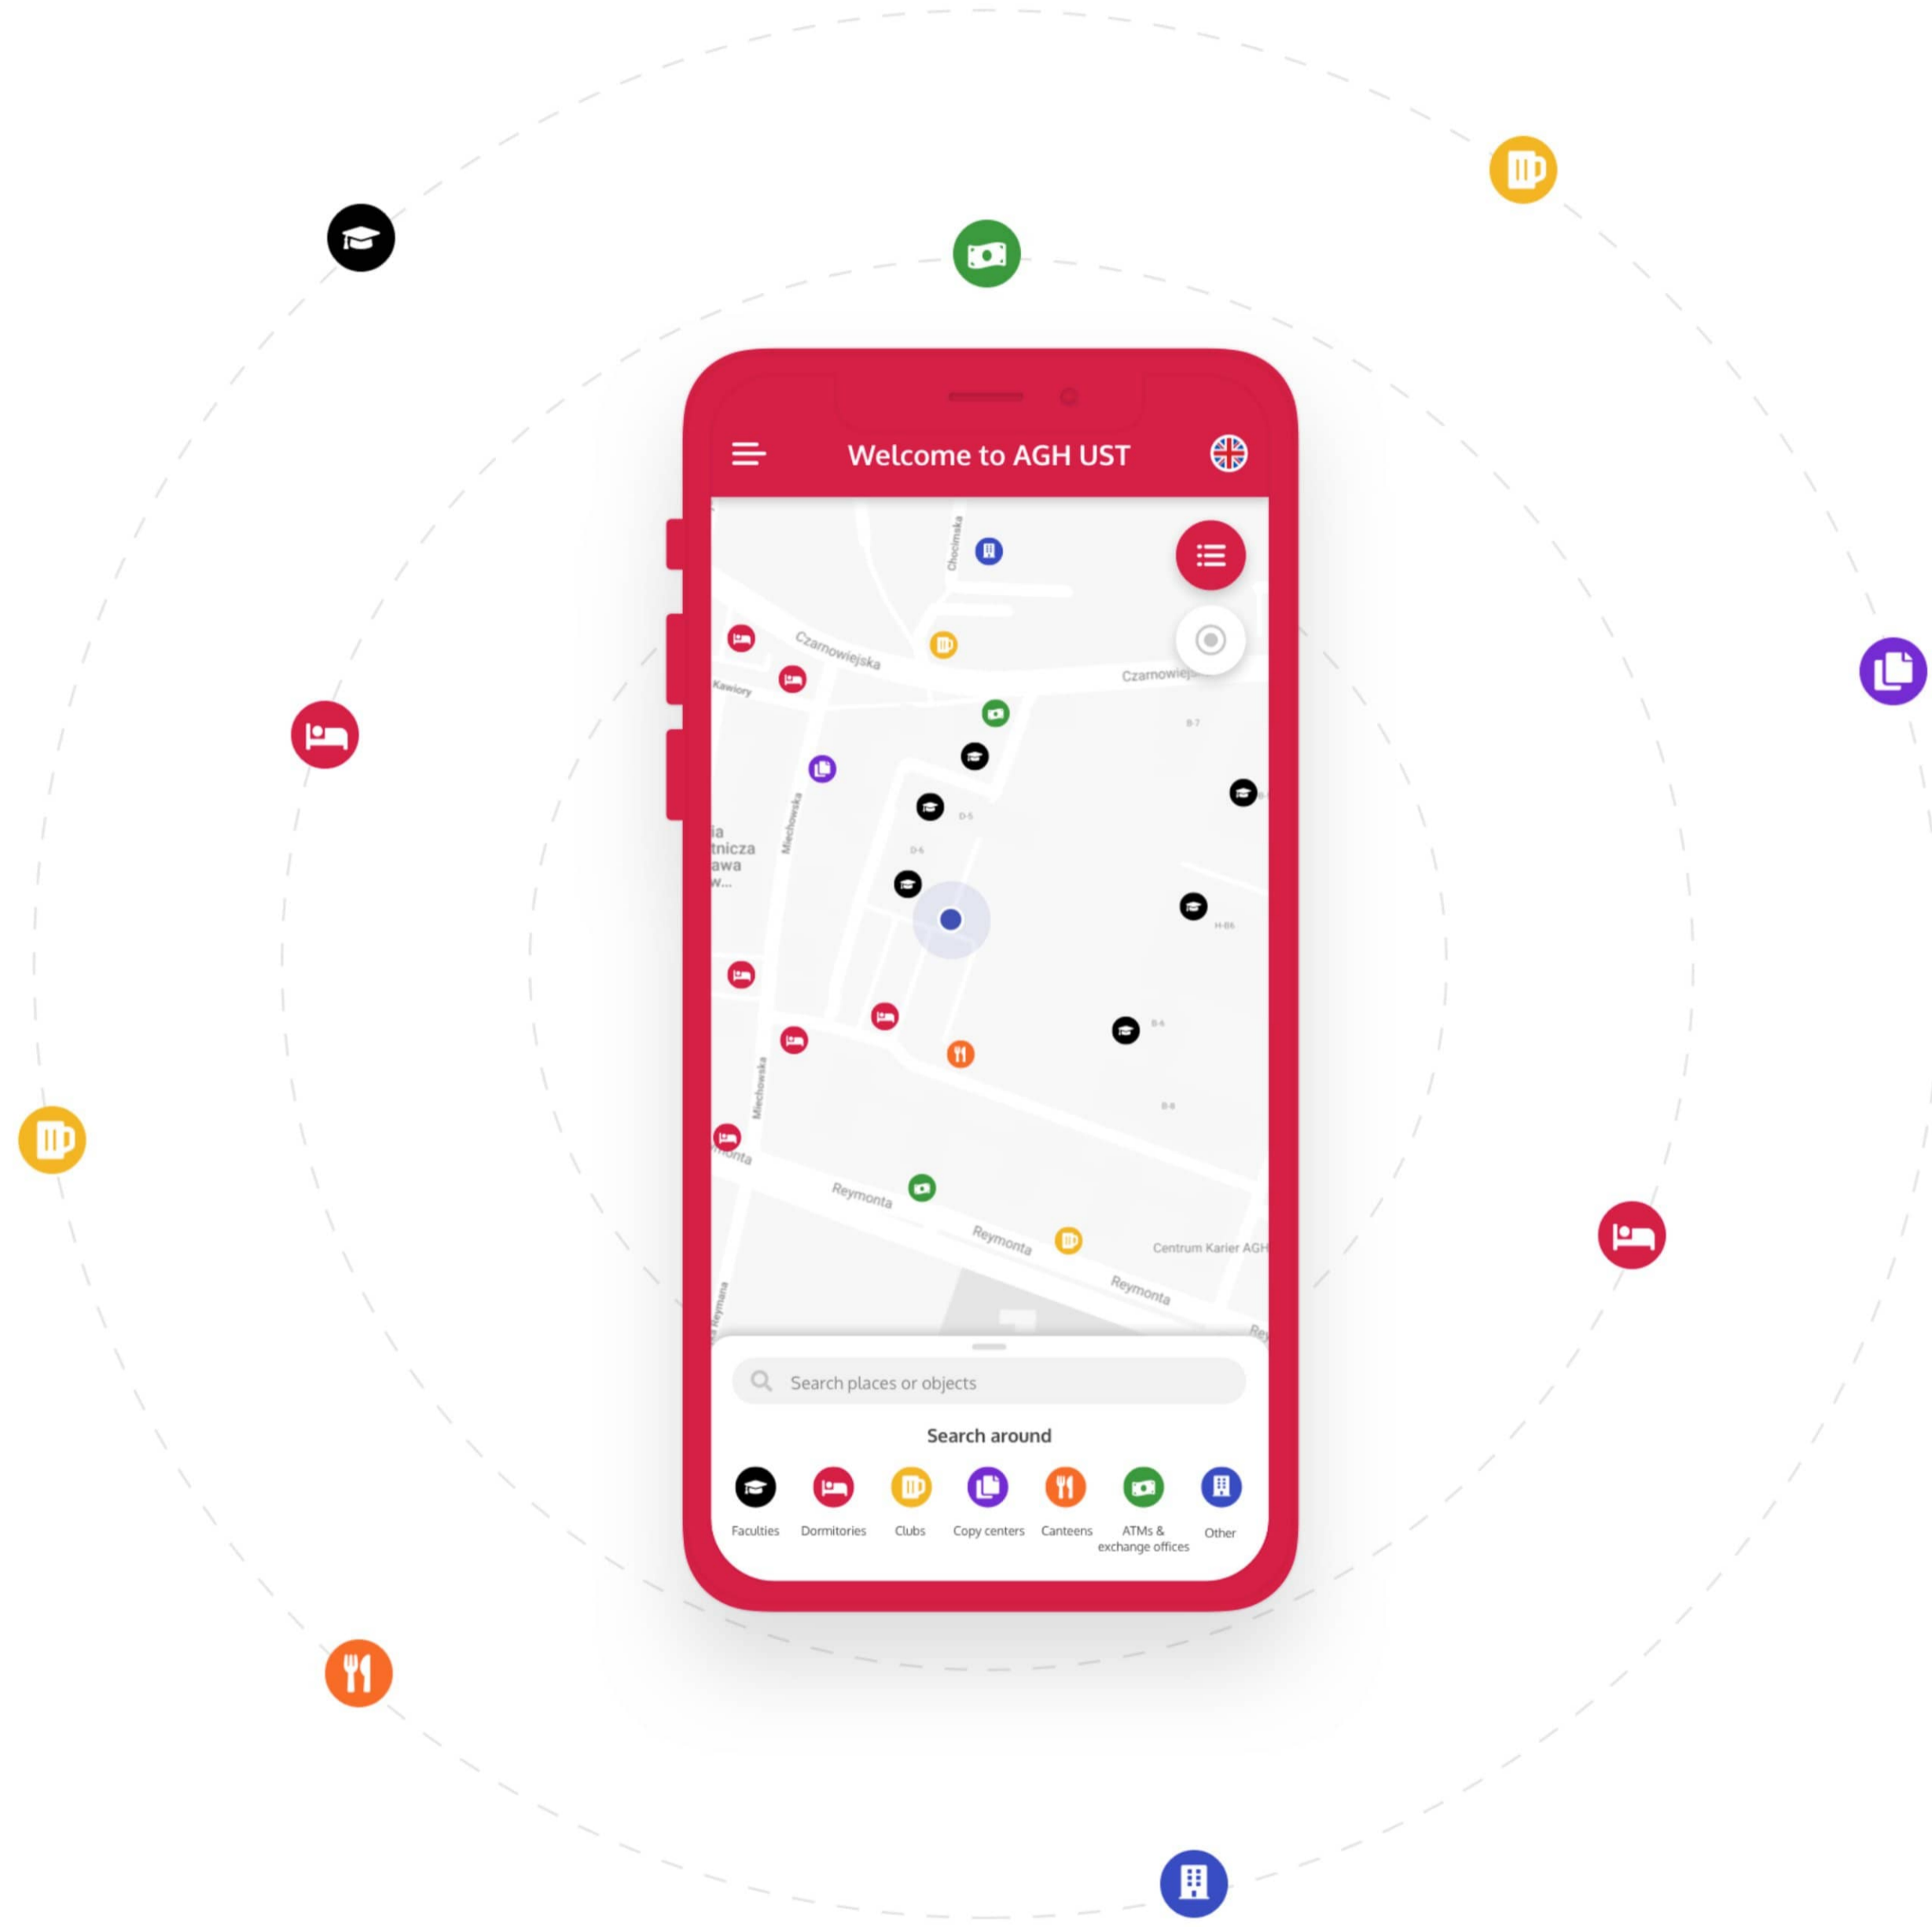

Flutter is a set of user interface tools designed by Google to develop apps for Android, iOS, Windows, Mac, Linux, Google Fuchsia, and the web. It enables you to build applications from a single code. With a set of fully customizable widgets, you can build native interfaces in a matter of minutes. Flutter covers differences in scrolling behavior, typography, icons, and more. By using this tool, our developers are able to create high-performance applications that work perfectly across platforms.

## What is the innovation of the technology?

Flutter is the fastest way to deliver a cross-platform mobile app. The distinctive features of the tool are as follow:

- Allowing a single developer to create an application for different platforms
- Minimizing risks and losses for the business
- Having a high potential for UI customization
- Enabling immediate verification of changes implemented in the project
- Allowing instant code extension

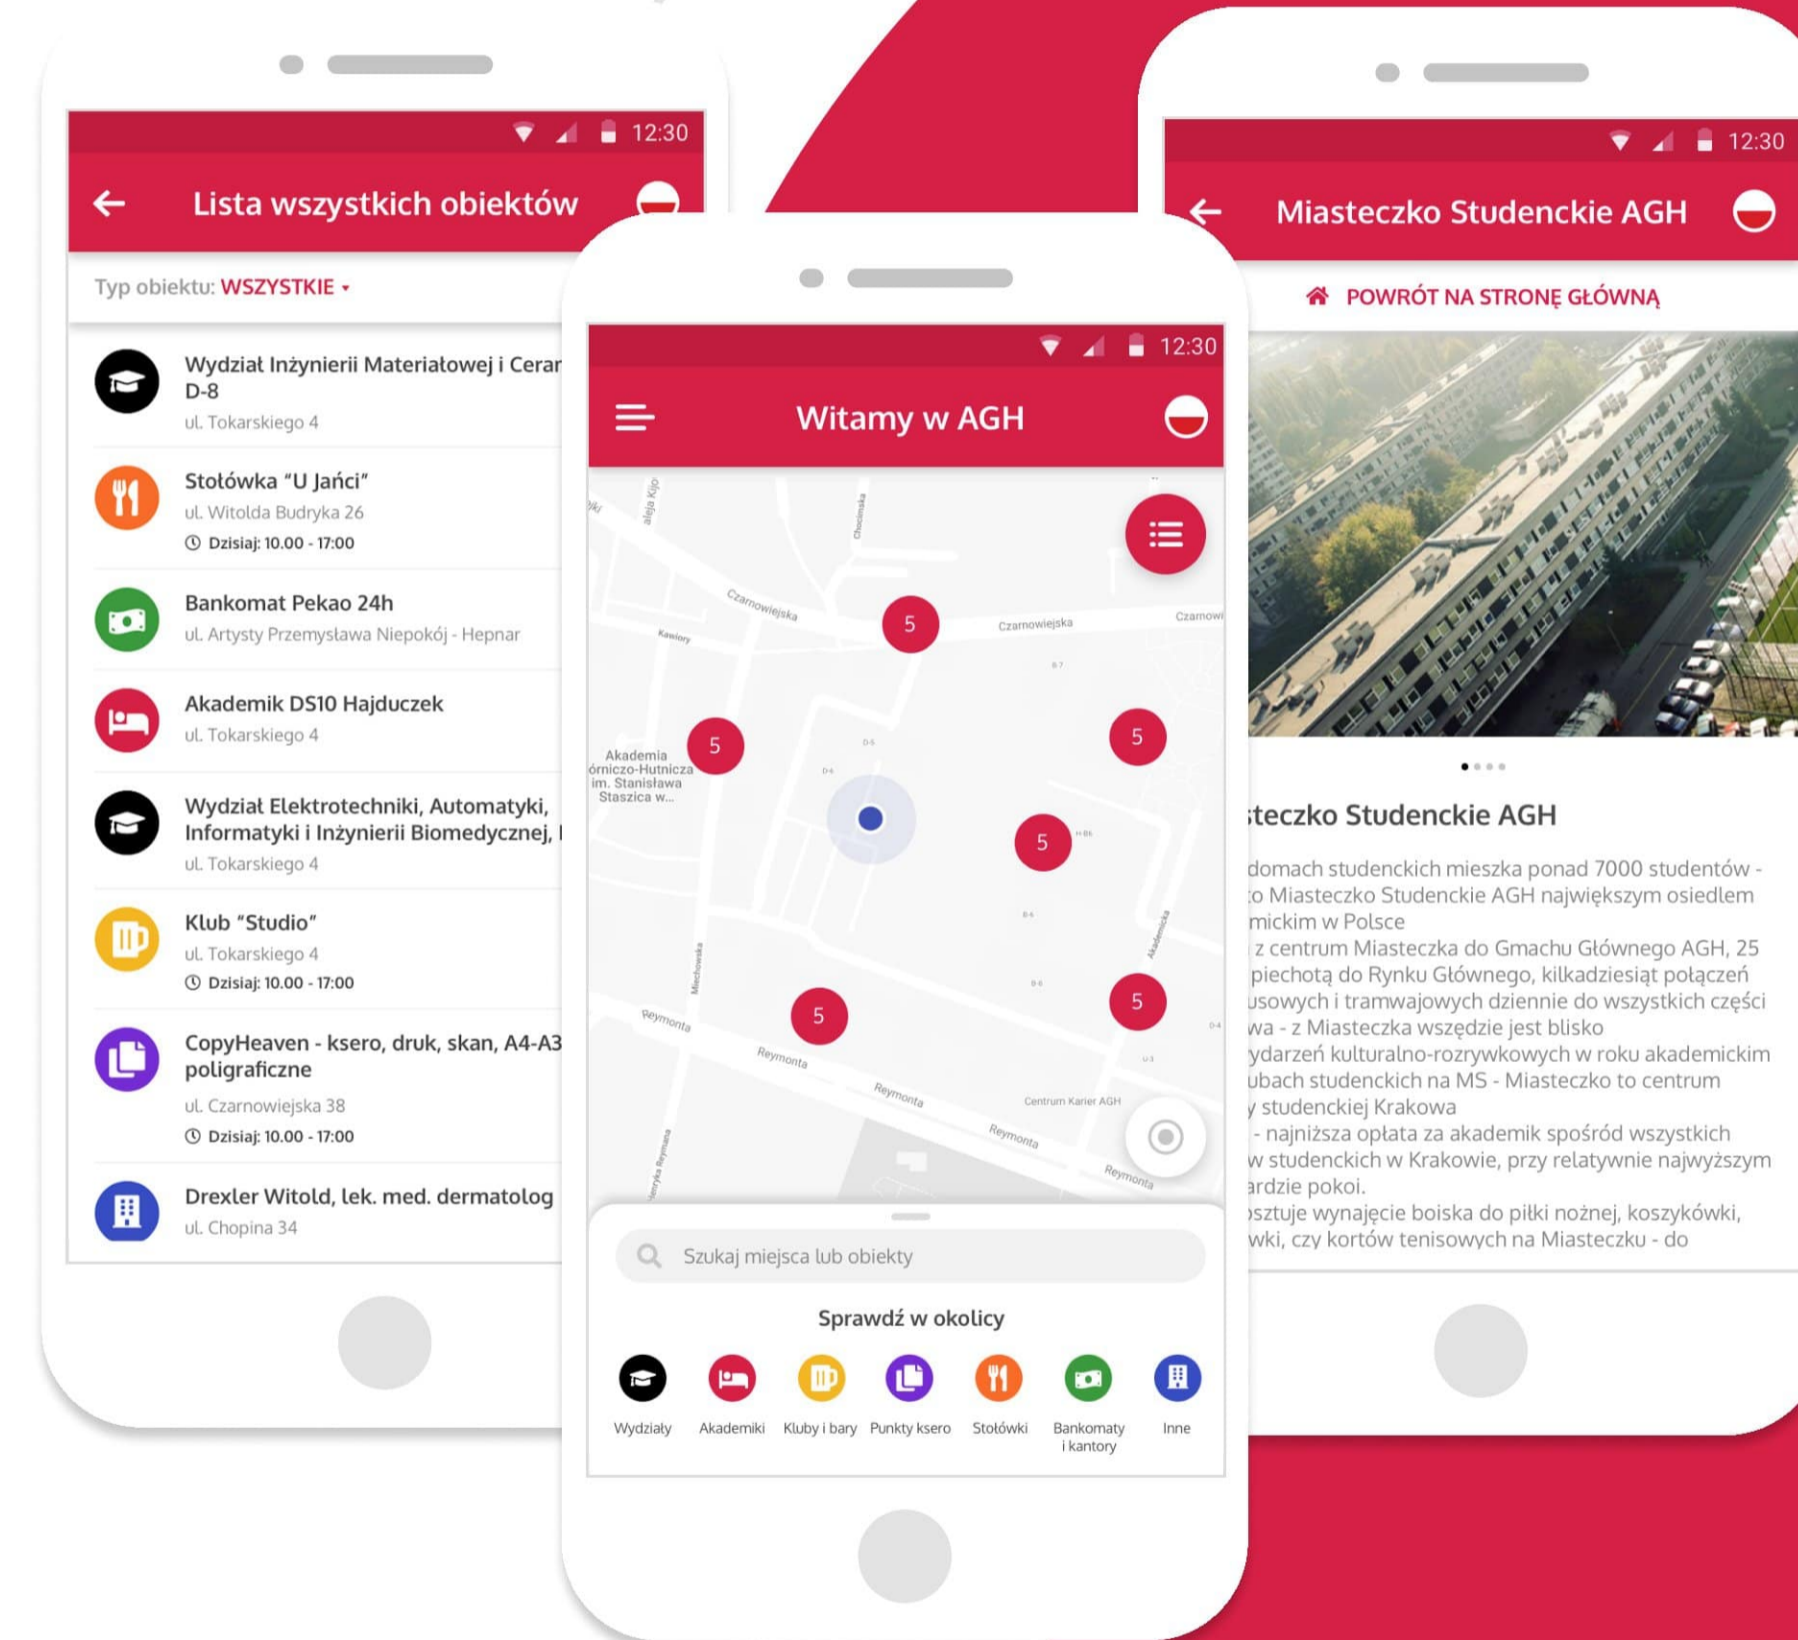

# Welcome to AGH UST!

Application for students of AGH  
University of Science and Technology

The "Welcome to AGH" application is addressed to all international students. This includes the first-time visitors to the campus and candidates willing to study at AGH University of Science and Technology.

Its main purpose is to help students move around the AGH campus and provide them with the necessary information. This would include the opening hours of the Dean's Offices, location of AGH premises (faculties, dormitories, sports facilities, student clubs, copy centers, canteens, and many others) with the navigation function, events, and news related to student life plus information about Krakow and its major attractions.

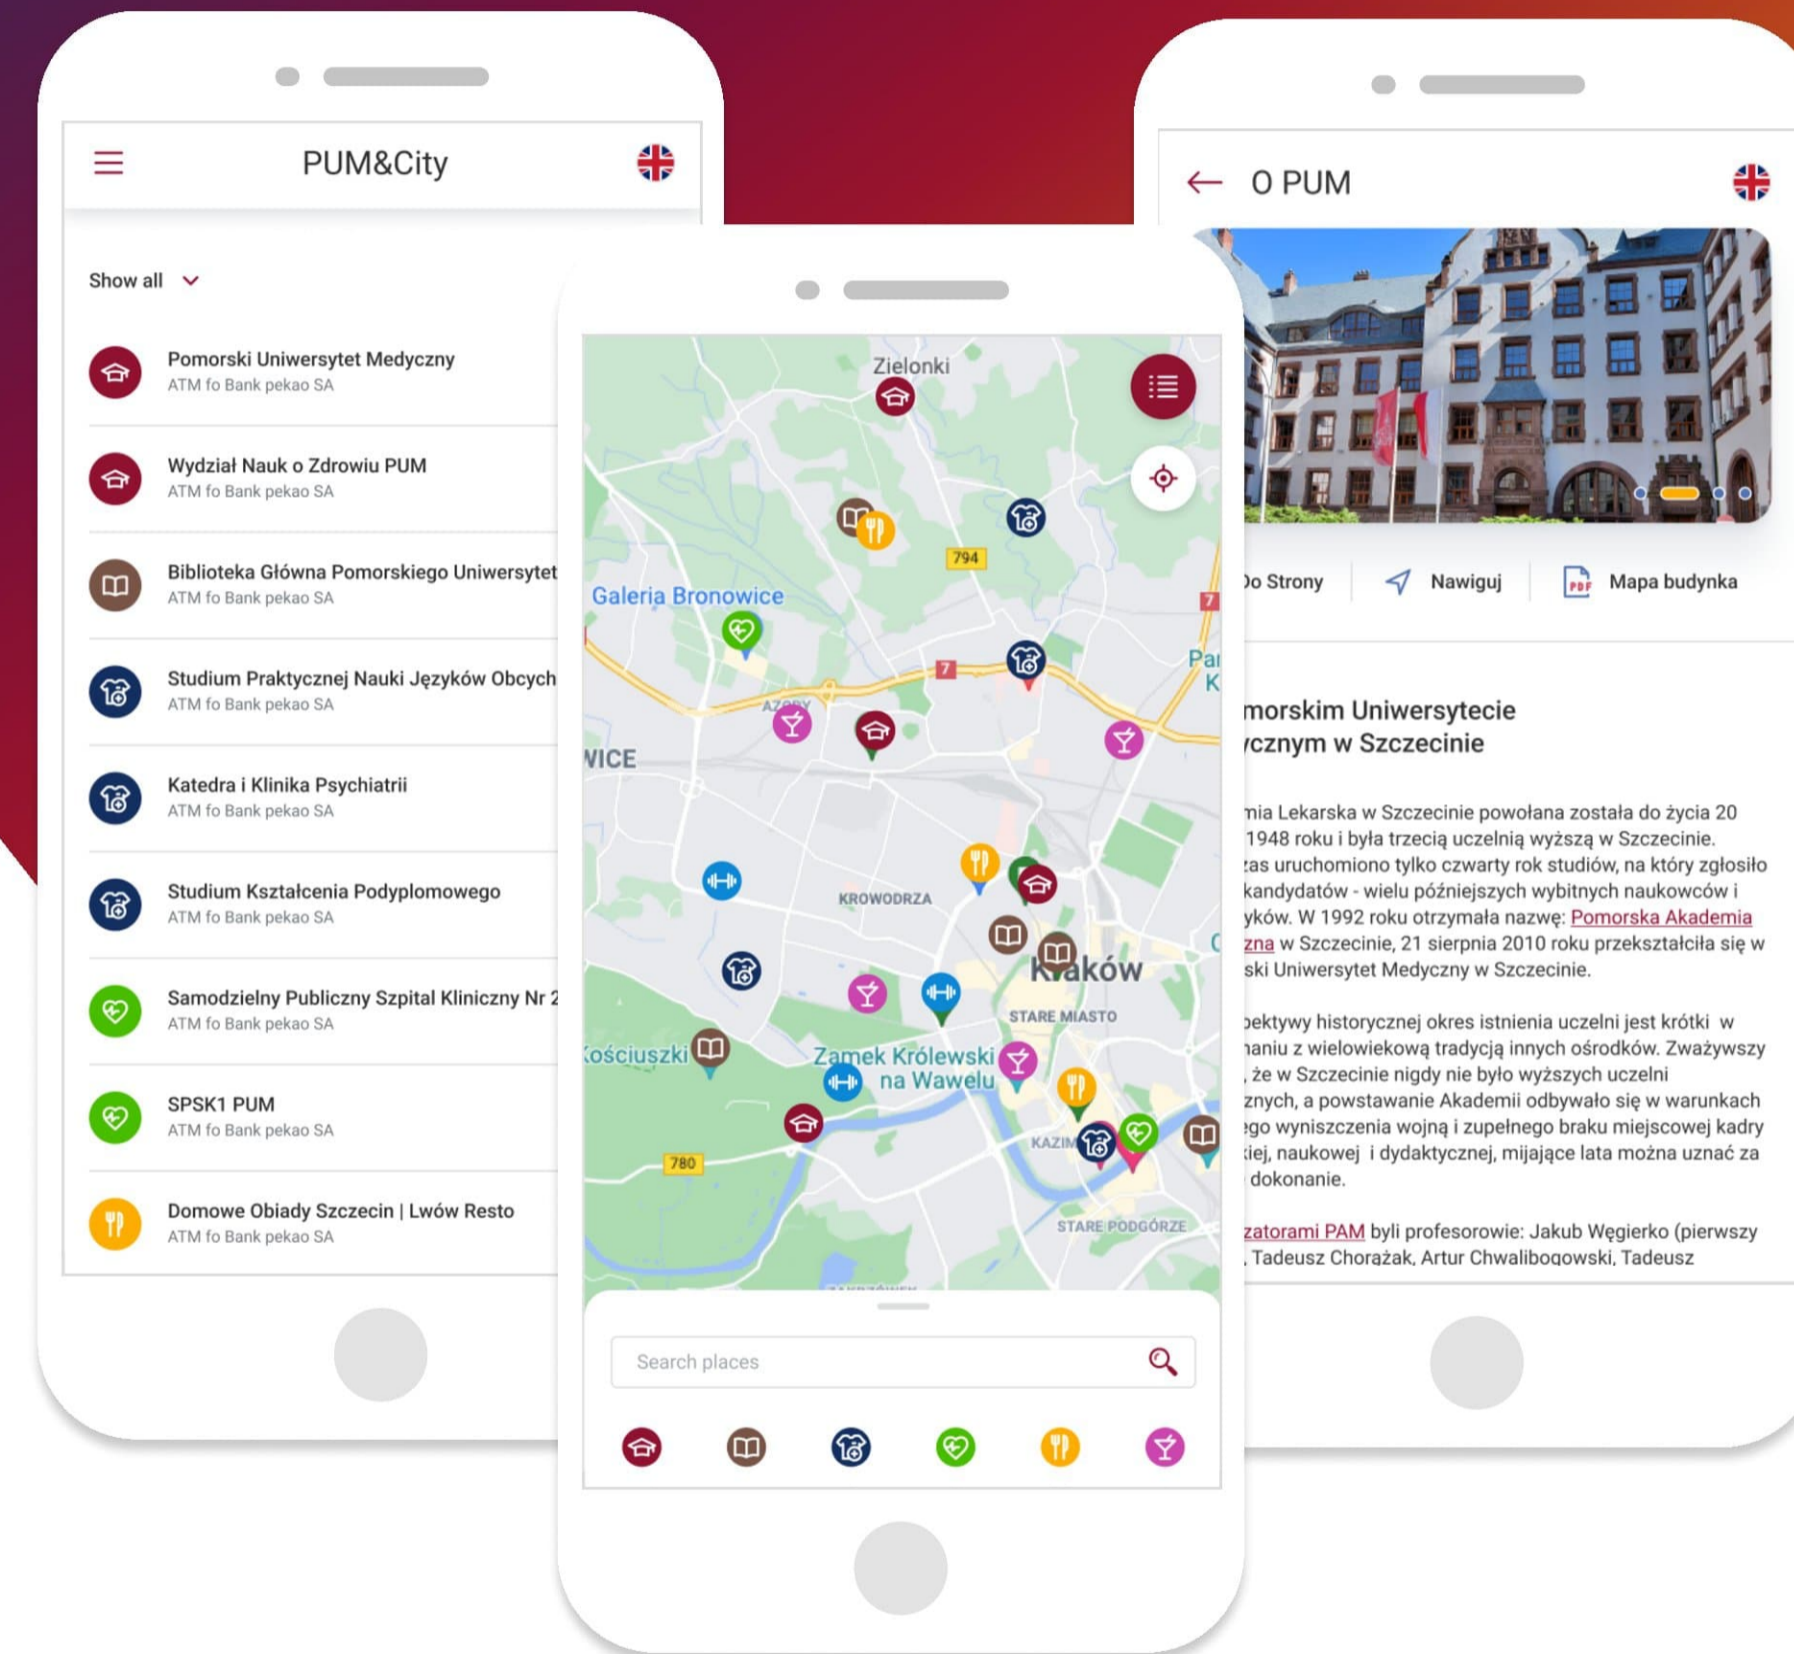

# PUM &CITY

Application for candidates and students of Szczecin University of Medical Sciences

The idea of the PUM&CITY mobile application is a response to the needs of foreign students and people visiting the University.

The application is designed to provide students with fundamental information about Pomeranian Medical University and studying in Szczecin. One of the main features of the project is providing students and candidates with a map displaying all the most important points from the perspective of a foreign student. Moreover, the map also provides a route planner.

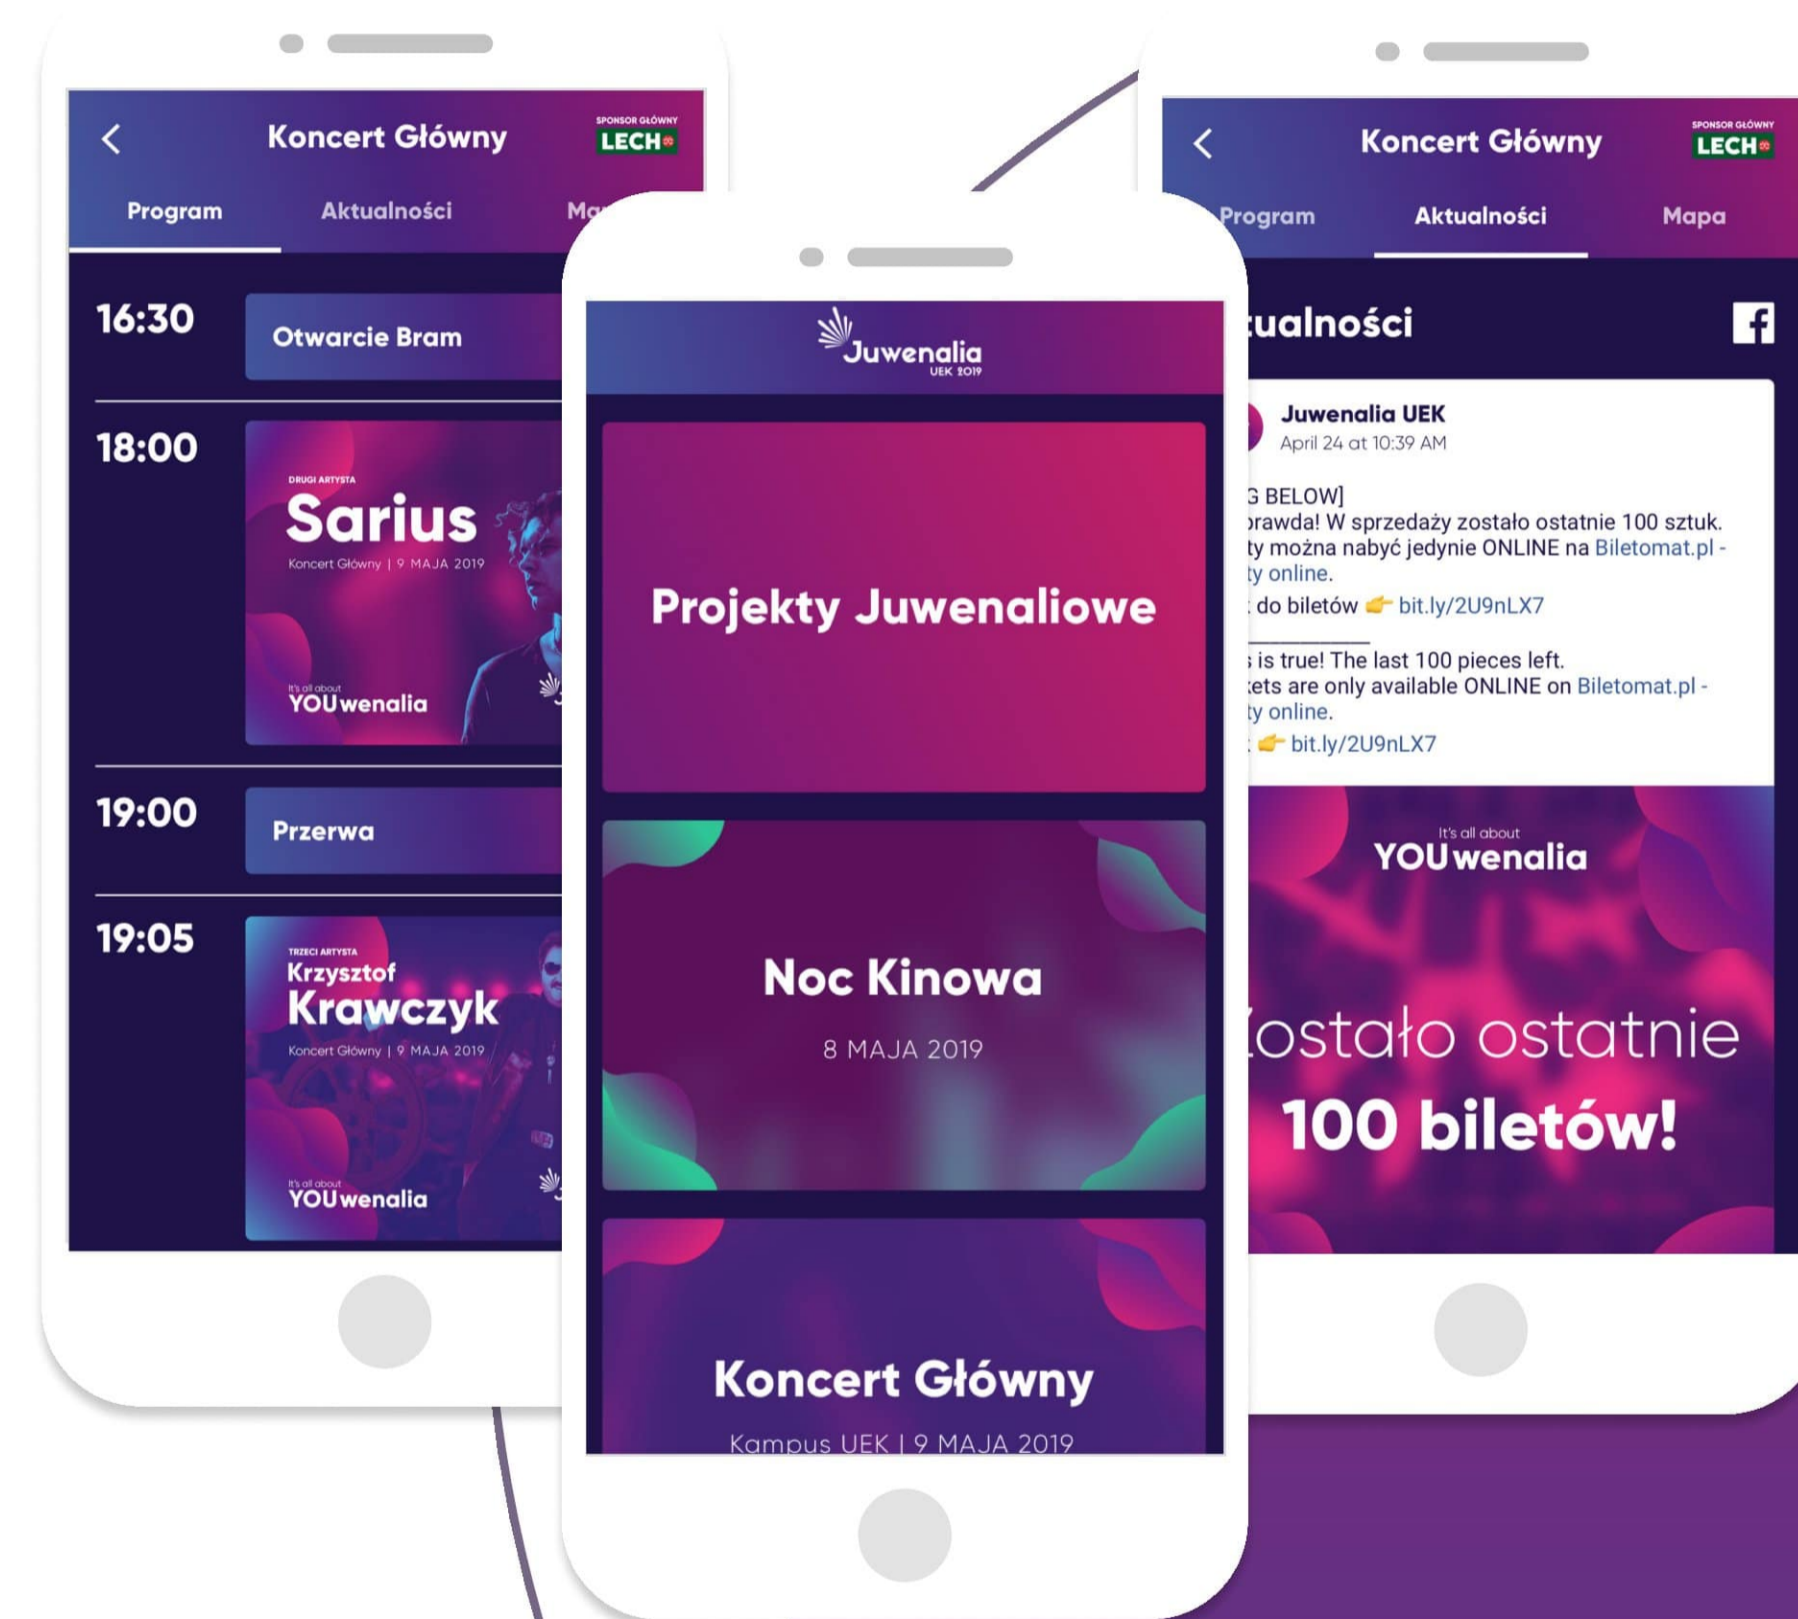

# Juwenalia UEK

Enjoy our festival even more

Juwenalia UEK is a student festival at the Cracow University of Economics. The entire project consists of 8 amazing events organized entirely by volunteers. The event gathers over 10000 participants every year. The Juwenalia UEK app assists them in navigating the campus through the map and POIs. The app includes the concert lineup and all social media notifications.

# Testimonial

## Welcome to AGH UST!

Building an app and landing page for a higher education organization

”

People were very impressed with the innovative design of the app and the simple implementation process. It is aesthetically pleasing and will be very useful for our university.

Karolina Andrzejewska, International Marketing Specialist  
AGH

”

While allowing plenty of room for creativity, they still worked within a stable procedure.

# Smart!

## A Wise Choice!

We create applications that will make your business shine. We are experts in cross-platform Flutter technology. Bet on a powerful app that runs on both iOS and Android.

### ● You can feel secure
